Update Guide: Community Features

For Sam & Trevor · win prediction, achievements, rivalries, seasons, match nights, server status, map vote · same two containers

What's in this update

Feature	What it does
Win prediction	Once teams are set (draft or Randomize), the bot posts each team's chance to win and, for every player, how much Elo they can win or lose. It's a range because each player's Rating 3.0 scales it by up to 30%. Scorecards and match pages show the pre-match odds and flag upsets.
Achievements	40 badges with our own artwork: feats (Ace, 1v4 clutch, 30-bomb, comebacks, upsets), milestones (10/50/100 matches, kill counts, win streaks), rank tiers, season podiums, and a small hall of shame. Worked out from all past matches. New unlocks are posted under the scorecard with the badge.
Who killed who	Every demo now records kills, headshots and opening duels between each pair of players. Profiles get a head-to-head table, a teammates table, Nemesis / Favorite victim / Best teammate, and opening duels split by T and CT side.
Duos & rivalries	New **Community** page: best, most cursed and most-played duos, biggest rivalry, most one-sided matchup, plus this week's highlights.
Weekly recap	Posted every Monday at noon: player of the week, biggest climber, best single game, biggest upset, duo of the week, new achievements. Also **/recap** any time.
Seasons	Every 3 months (Season 1 is Oct to Dec 2026). At a new season, Elo moves halfway back to 1500 and ranks show again after 2 matches. Final standings are posted; the top 3 get Podium, #1 gets Season Champion. Season filter on the leaderboard and a Seasons page.
Match night signups	**/matchnight** posts In / Maybe / Can't buttons, pings everyone when there's enough, reminds them 30 minutes before, and opens a match lobby with everyone who's in at start time.
Live server status	One message in a channel of your choice that keeps showing the map, who's on and a Join button, plus the bot's status line (“Watching Mirage · 6/10”). **/status** for a private check.
Back to lobby	When the scorecard posts, everyone in the two team channels is moved back to the lobby voice channel. There's also a **Back to Lobby** button under the final teams.
Map vote (optional)	New **Map Vote** lobby button for whoever started the match. Pick maps we've played from a list and/or type any map name (typed maps aren't saved anywhere). Lobby players vote with buttons; the starter ends it.

No new containers, no new ports. Everything runs in **matchbot-stats** and **match-bot**. The Cloudflare tunnel doesn't change.

Step 1: Push the branch (Sam, on his PC)

This update and the earlier Elo fix are both on the `elo-teams` branch. In PowerShell:

```
cd "C:\Users\sAM dEMPSEY\Desktop\cs2-match-bot"
git push origin elo-teams
```

Step 2: Merge it into main (GitHub)

- Open **github.com/trev9575/match-bot/compare/main...elo-teams**, click **Create pull request**, then **Merge pull request** › **Confirm merge**.
- Open the **Actions** tab and wait for the newest run to show a **green check** (about 3 minutes).

Step 3: Update both containers (Trevor, Unraid)

- Unraid › **Docker** › **Check for Updates** › **apply update** on **matchbot-stats** and on **match-bot**.
- The stats service adds its new tables by itself; the match history stays. The bot registers the new commands (/matchnight, /recap, /status) when it starts.

One-time background job: right after the update, the stats service re-reads each existing demo once to fill in who-killed-who and the T/CT split. It runs at the lowest CPU priority, a few demos at a time, and only while no new demo is waiting, so it won't affect a game. Its log shows `refreshed details for match #…` for each one. Head-to-head tables fill in as it goes; games imported from server logs (no demo) don't get this detail.

Step 4: Discord setup (Trevor or Sam, in Discord)

- Turn on **Developer Mode** if it isn't already (User Settings › Advanced) so you can copy IDs.
- **Server status channel (recommended):** create a channel like **#server-status** where only the bot can post. Right-click it › **Copy Channel ID**.
- **Lobby voice channel:** right-click the voice channel people hang out in before and after matches › **Copy Channel ID**.
- **Bot permissions:** in the stats channel and the status channel the bot needs **View Channel**, **Send Messages**, **Embed Links** and **Attach Files** (achievement badges are attached as images). It already has **Move Members** for the team channels; that also covers moving people back to the lobby.

Step 5: Add the new settings (Trevor, match-bot container)

Docker tab › **match-bot** › **Edit**. For each row, click **Add another Path, Port, Variable…**, choose **Variable**, and fill in Key and Value. Then click **Apply**.

Key	Value	Notes
`STATUS_CHANNEL_ID`	the #server-status ID	Leave it out to skip the status message (the bot's status line and /status still work).
`LOBBY_VOICE_CHANNEL_ID`	the lobby voice ID	Where people go back after a match. Without it, the bot uses the voice channel the match starter was in.

Key	Value	Notes
`TIMEZONE`	America/New_York	For /matchnight times and the Monday recap. Use your own if different.

Server status uses `CS2_LAN_ADDRESS` (192.168.0.204, set last update) to ask the game server for its map and players, because the bot runs on the same network. Nothing else is needed for it. Optional settings, only to change the defaults:

Key	Default	Meaning
`RECAP_DAY` · `RECAP_HOUR`	mon · 12	When the weekly recap posts (day mon…sun or `off`; hour 0–23).
`RECAP_CHANNEL_ID`	stats channel	Post the recap and season results somewhere else.
`AUTO_LOBBY_RETURN`	true	`false` = don't move people back automatically (the button still works).
`MATCHNIGHT_REMIND_MINUTES`	30	How long before a match night the In list gets reminded.
`MATCHNIGHT_AUTO_LOBBY`	true	`false` = don't open a lobby by itself at start time.
`STATUS_QUERY_ADDRESS`	LAN address	Only if status says offline while the server is up: the IP:port the bot should ask.

Seasons are set on **matchbot-stats** and the defaults are fine: `SEASON_MONTHS=3`, `SEASON_ANCHOR=2026-10-01` (Season 1 started Oct 1), `SEASON_CARRY=0.5` (keep half of your distance from 1500), `SEASON_PLACEMENT=2`.

Step 6: Check that it worked

Website

- The top of every page has **Leaderboard · Community · Achievements · Seasons**.
- **Community** shows this week's highlights, duos and rivalries. **Achievements** lists all 40 with how many players have each. **Seasons** shows Season 1's live standings.
- On a player page: an **Achievements** grid, **Opening duels** (with T/CT), **Rivals**, **Head to head** and **Teammates** tables, and an **Odds** column in the match list.
- On a match page: **Pre-match odds** (with an Upset tag when the underdog won) and any achievements unlocked in that match.
- The leaderboard's time filter now also lists seasons.

Discord

- Within a minute of the bot starting, a status message appears in #server-status, and the bot's member-list status shows the map and player count.
- **/status** shows the same thing privately; **/recap** shows the last 7 days.
- Run **/startmatch**: the second row of buttons now ends with **Map Vote**.

Using the new features

Match nights

- **/matchnight when:fri 9pm** (optional `players:10`, `note:…`). Times like `8pm`, `tonight 9`, `tomorrow 8:30pm`, `sat 1pm` or `11/14 8pm` work. A bare hour (`9`) means 9pm.
- People click **I'm in**, **Maybe** or **Can't make it** (they can change it any time). Whoever posts it starts as In.
- When the In list reaches the player count, the bot pings them once. 30 minutes before, it pings In (and Maybe) again.
- At start time it opens a normal match lobby with everyone who's In already added, so you can go straight to Randomize or Start Picking. The host (or an admin) can also **Open Lobby Now** or **Cancel**.
- Signups are saved in the stats database, so restarting the bot doesn't lose them.

Map vote

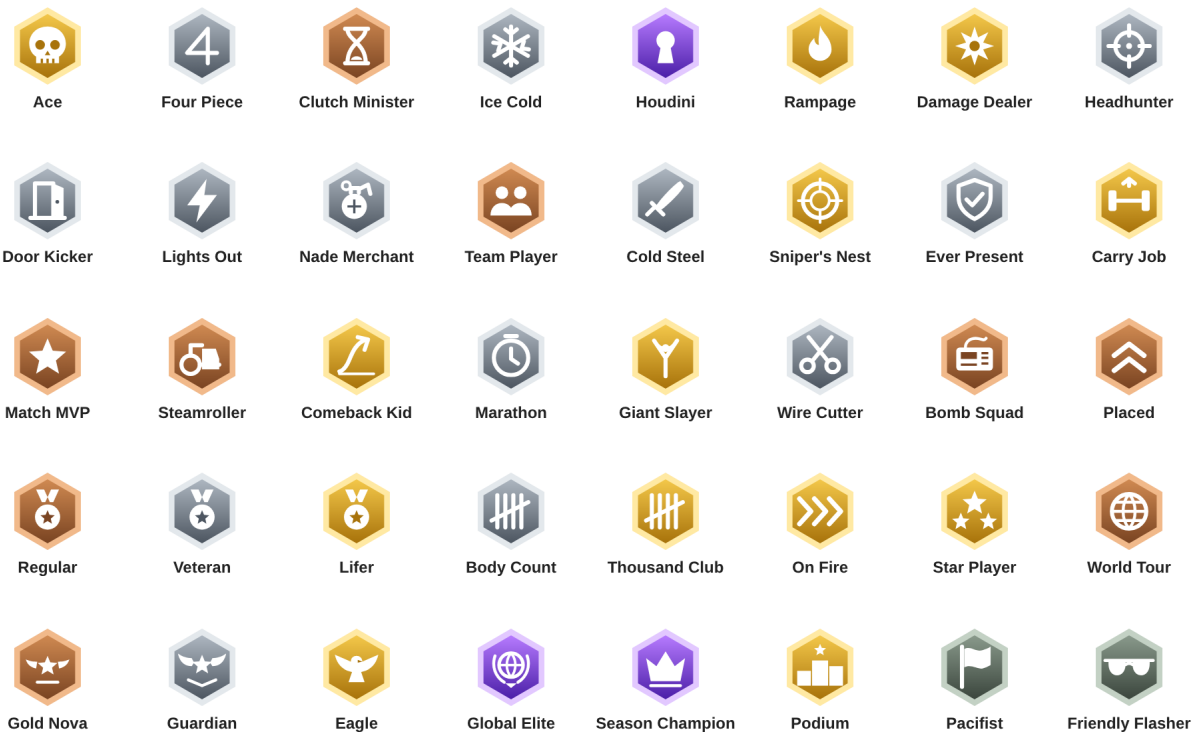

- In the lobby, whoever started the match (or an admin) clicks **Map Vote**. A private setup message opens.
- Tick maps from **Maps we've played** (the list fills up as you play new maps), and/or click **Type a map…** and enter names separated by commas, like `Cache, Train, Thera`. Typed maps are only for this vote.
- Click **Start Vote**. Everyone in the lobby gets map buttons with live counts and can change their vote. Only lobby players can vote.
- The starter clicks **End Vote**; the winner is announced (ties are broken at random) and shown on the final teams board. It's up to you to load that map on the server; the bot never sends commands to the server.

Win prediction and Elo at stake

After the draft finishes or teams are randomized, the bot posts a **Win prediction**: each team's chance, and for every player “win +18 to +33 · lose –24 to –44”. The range is the Rating 3.0 adjustment: a great game moves you toward the top of the win range and the small end of the loss range. Underdogs win more and lose less. Players still in placement show “in placement”; unlinked players count as new 1500 players.

Achievements

Gold, silver, bronze and purple (elite) badges by difficulty; grey-green ones are the hall of shame. Repeatable feats (like Ace) show a count on the profile. They're recalculated from the whole match history, so deleting a bad match also removes anything it unlocked.

How seasons work

- Seasons run Jan–Mar, Apr–Jun, Jul–Sep, Oct–Dec. Season 1 is Oct–Dec 2026.
- When your first match of a new season is played (or when you look at the leaderboard), your Elo moves halfway back to 1500: 1800 becomes 1650, 1300 becomes 1400. Uncertainty goes up, so the first few games of a season move more.
- Ranks hide (“Season placement 0/2”) until you play 2 matches in the new season. Your old matches keep their Elo changes.
- The season's final standings are kept forever: pick the season in the leaderboard filter, or open the Seasons page. The bot posts the final top 10 when a season ends.

Troubleshooting

Problem	Check
Status says offline but the server is up	The bot asks CS2_LAN_ADDRESS on CS2_SERVER_PORT (192.168.0.204:27015 unless you changed the port). If the game port is different, set STATUS_QUERY_ADDRESS to 192.168.0.204:port.
No status message appears	STATUS_CHANNEL_ID is missing or wrong, or the bot can't post there (View Channel, Send Messages, Embed Links). match-bot › Logs shows “[status]” errors.
Achievement posts have no badge image	Give the bot Attach Files in the stats channel.
People aren't moved back to the lobby	Set LOBBY_VOICE_CHANNEL_ID. The bot moves whoever is in the Team 1 and Team 2 voice channels when the scorecard posts (about a minute after the match ends).
/matchnight says it can't read the time	Use a form like 8pm, fri 9pm, tomorrow 8:30pm or 11/14 8pm. Times are in TIMEZONE.
Match night times are off by hours	TIMEZONE on match-bot isn't your timezone (it defaults to America/New_York).
Head-to-head tables are empty	Old demos are still being re-read (Step 3 note), or those games came from server logs, which have no kill-by-kill detail.
Map Vote has no list, only Type a map	Normal until maps have been played and recorded, or the stats service is unreachable.
New commands missing	match-bot › Logs should say “Commands registered!”. Restart the Discord app.
